

Step1: S3 bucket is created

The screenshot shows the AWS S3 Buckets page. At the top, a green banner displays the message "Successfully created bucket 'my-339294940997-bucket'" and a link to "View details". Below the banner, the page header includes "Amazon S3 > Buckets". A "Account snapshot - updated every 24 hours" section is present, along with a "View Storage Lens dashboard" button. The main content area shows two tabs: "General purpose buckets" (selected) and "Directory buckets". Under "General purpose buckets", there is a table with one row. The row contains the bucket name "my-339294940997-bucket", its AWS Region "US East (N. Virginia) us-east-1", a link to "View analyzer for us-east-1", and its creation date "June 4, 2024, 20:32:32 (UTC+01:00)". Action buttons for "Copy ARN", "Empty", "Delete", and "Create bucket" are located at the top right of the table.

Step2: The static website related files & folders have been uploaded to the bucket my-339294940997-bucket

The screenshot shows the AWS S3 Objects page for the bucket "my-339294940997-bucket". The top navigation bar includes tabs for "Objects" (selected), "Properties", "Permissions", "Metrics", "Management", and "Access Points". Below the navigation, a table lists four objects. The objects are: "css/" (Folder), "img/" (Folder), "index.html" (html file), and "vendor/" (Folder). The "index.html" file has a last modified date of "June 4, 2024, 20:35:47 (UTC+01:00)" and a size of "6.1 KB". Action buttons for "Upload", "Copy S3 URI", "Copy URL", "Download", "Open", "Delete", "Actions", and "Create folder" are available at the top of the object list. A search bar "Find objects by prefix" is also present.

Step3: S3 Bucket has been configured for static website hosting. Endpoint shared in screenshot below:

The screenshot shows the "Static website hosting" configuration page for the bucket "my-339294940997-bucket". The page indicates that static website hosting is "Enabled". Under "Hosting type", "Bucket hosting" is selected. The "Bucket website endpoint" section shows the generated endpoint: "<http://my-339294940997-bucket.s3-website-us-east-1.amazonaws.com>". An "Edit" button is located in the top right corner of the configuration panel.

Step4: S3 Bucket IAM Policy & Permissions (Screenshot taken After CloudFront Distribution):

The screenshot shows the AWS S3 Bucket settings page. In the 'Block public access (bucket settings)' section, 'Block all public access' is set to 'Off'. In the 'Bucket policy' section, there is a JSON policy document:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "AddPerm",
      "Effect": "Allow",
      "Principal": "*",
      "Action": "s3:GetObject",
      "Resource": "arn:aws:s3:::my-339294940997-bucket/*"
    }
  ]
}
```

Step5: Cloudfront has been created :

The screenshot shows the AWS CloudFront Distributions page. It lists one distribution named 'E29WROH8RJQ07X' with the domain name 'd2hhk65baiidm8.cloudfront.net'.

Step6: Cloudfront configuration with domain name

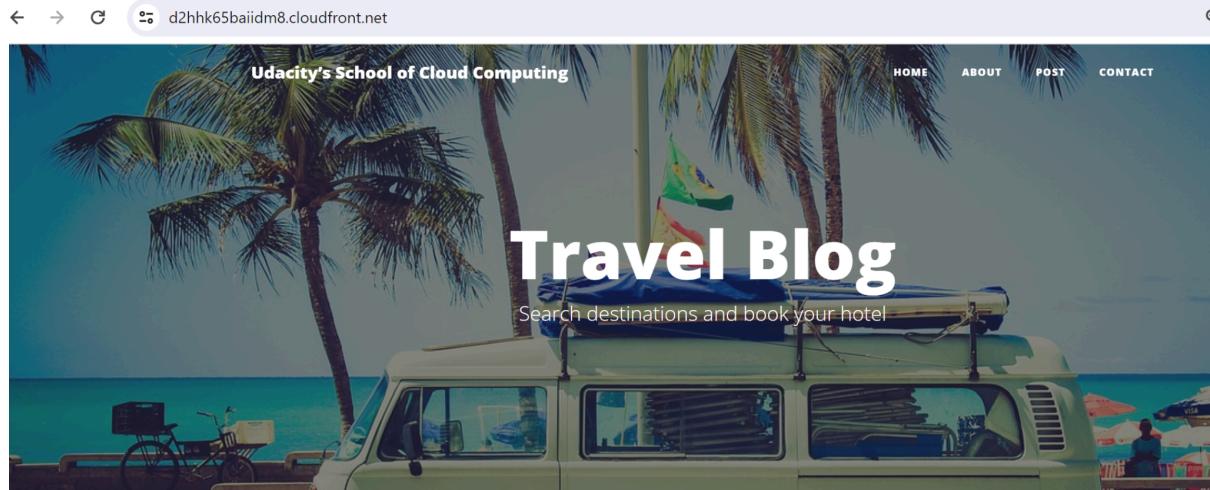

The screenshot shows the AWS CloudFront Distribution configuration page for 'E29WROH8RJQ07X'. The 'General' tab is selected. Key details shown include:

- Distribution domain name: d2hhk65baiidm8.cloudfront.net
- ARN: arn:aws:cloudfront::339294940997:distribution/E29WROH8RJQ07X
- Last modified: June 4, 2024 at 7:49:58 PM UTC

The 'Settings' tab shows the following configuration:

Description	Alternate domain names	Standard logging
-	-	Off
Price class		Cookie logging
Use all edge locations (best performance)		Off
Supported HTTP versions		Default root object
HTTP/2, HTTP/1.1, HTTP/1.0		-

Step7: Web Browser Access
